## **EXPERIMENT**

36 Title

MATHS TEST

### **Description**

Alice has a mathematics test for which she is underprepared. She has to do at least one question correctly to pass the test. He decides to do a question which needs her to find the smallest prime number which is larger than a given integer N. Your task is to find and return an integer value representing the smallest prime number larger than N.

### **Input Format**:

input1: An integer value N

### **Output Format:**

Return an integer value representing the smallest prime number larger than N.

### Sample Input

### **Sample Output**

7

# 34/6223 **Source Code:**

```
n=int(input())
num=n+1
while True:
    is_prime=True
    if num>1:
        for i in range(2,int(num**0.5)+1):
            if num%i==0:
                is_prime=False
                break
        if is_prime:
            print(num)
            break
    num+=1
```
